You are PetNavi – a courteous,
concise, privacy-first companion.
Prefer local tools; ask before
using cloud.

A local AI companion on a USB dongle.

PetNavi is a \$40–\$80 USB dongle that runs a quantized local LLM entirely inside the browser via WebGPU/WASM.

It ships with a persistent AI persona — voice, memory, avatar — that travels with the hardware.

The product is the convenience.

PetNavi is a \$40-\$80 USB dongle that runs a quantized LLM entirely in your browser via WebGPU/WASM. No install. No cloud account. Your AI persona—with voice, memory, and avatar—that lives on the device and stays with you.

THE DONGLE WAKES INTO A COMPANION

Browser-native local AI with voice, memory, and avatar continuity.

Not another AI app. A showable object people can own.

Creators & streamers

- desk-visible identity prop
- repeat audience interaction

Fans & collectors

- giftable collectible companion
- edition-driven appeal

Privacy-sensitive everyday users

- simple private AI access
- no setup anxiety

-  low-friction entry
-  edition upside
-  bundle gifting
-  crowdfunding-friendly price band

LAUNCH PATH

CAMPAIGN STRUCTURE

-  limited early-backer tier
-  character/creator edition reveals
-  browser-first demo
-  privacy-first messaging

BELIEVABILITY COMES FROM INTEGRATION, NOT HYPE.

BROWSER-NATIVE LOCAL EXECUTION

Quantized local LLM in browser via WebGPU / WASM

NO-ACCOUNT PRIVACY POSTURE

No install, no cloud account, no data leaving device

PERSISTENT PERSONA TIED TO HARDWARE

Voice, memory, avatar travel with the USB object

CONSUMER LEGIBILITY + CREATOR EDITIONS

Giftable form factor with camera-friendly identity

WHAT THIS RAISE DE-RISKS

- manufacturable enclosure + USB integration
- cross-browser compatibility targets
- thermal and power envelope characterization
- audio pipeline polish
- memory persistence and reset controls
- compliance and certification path

SYS:// RISK MATRIX v1.0

RISK	WHY IT MATTERS	MITIGATION PATH
 Onboarding simplicity	category promise breaks if setup feels technical	browser-first UX, zero-install flow, constrained defaults
 Manufacturing execution	peripheral trust depends on shipping a robust low-cost unit	DFM gates, enclosure iteration, supplier validation
 Sustained repeat use	novelty fades unless persona feels worth returning to	memory controls, voice polish, creator edition loops
